## DETAILED ACTION

### *Claim Rejections - 35 USC § 103*

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-4, 7-10 and 12-17 are rejected under 35 U.S.C. 103(a) as being unpatentable over White and FR 1,495,238, cited by applicant, (Bautz).

White discloses a rotary conveyor comprising:

- a rotatable drum-shaped shell (10) with openings (Column 3, line 69-71)
- a non-rotating eccentric axle (36) inside the shell
- finger supports (portion connecting the fingers 40 or 39) rotatively mounted parallel to the non-rotating eccentric axle by bearings (38)
- a plurality of fingers (39, 40) on each support next to each other

White fails to disclose attaching the fingers to the finger support by threaded openings and locking nuts and using multiple bearings to attach each finger support to the axle instead of one.

Like White, Bautz discloses the same type of rotary conveyor (Figures 1 and 2). The conveyor has finger supports attached to bearings that are attached to a fixed axle. However, Bautz attaches the fingers to the finger supports by screwing the fingers into threaded hole and providing a locking nut (Fig. 2). Bautz also attaches the finger supports to the axle with multiple bearings instead on a single bearing.

Art Unit: 3671

It would have been obvious to one having ordinary skill in the art at the time the invention was made, to attach the finger to the finger support in White by screwing the fingers into a threaded hole and providing a locking nut as in Bautz, in order to facilitate replacement of individual fingers and to use multiple bearings in White instead of a single bearing, in order to increase support of the finger support on the axle.

In regards to claim 2, the portion of the shell with fingers has three finger supports (Fig. 2).

In regards to claim 3, the finger supports are offset relative to one another (Fig. 2).

In regards to claim 4, the finger supports are identical to one another (Fig. 2).

In regards to claim 14, the fingers are inherently removable.

#### ***Response to Arguments***

3. Applicant's arguments filed 2/10/03 have been considered but are not persuasive.

In the amendment filed 2/10/03, applicant argues that the combination of White and Bautz is not obvious because Bautz fails to disclose mounting finger supports to an eccentric axis. However, as is clearly shown in Fig. 1, the finger supports have flanges on the end containing cavities 11 which are supported on the eccentric axle.

#### ***Conclusion***

4. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO**

Art Unit: 3671

MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
